EDUCATION

University of Massachusetts - Lowell
Master's, Computer Science

January 2026 - December 2026
GPA: 3.75

University of Massachusetts - Lowell
Bachelor's, Computer Science

September 2022 - December 2025
GPA: 3.913

PROFESSIONAL EXPERIENCE

University of Massachusetts - Lowell
Research Assistant in Robotics

September 2023 - Present
Lowell, MA, USA

- Lead a research project focused on developing an interface to display the visualization of planning and executing robot movement using augmented reality in an intuitive and understandable way for humans while doing household tasks with ROS1 and ROS2
- Developing an Augmented Reality tool in Unity application for a headset to visualize robot intent and planned robot movement given a task
- primarily using C++, Python, and ROS2
- Presented this on-going research at multiple University sanctioned research symposiums and awarded for Master's student research by UMass Lowell's Richard Miner's school of Computer Science

Cornell University
Research Undergraduate Experience

May 2024 - August 2024
Ithaca, NY, USA

- Worked with a dataset for robot caregiving, OpenRoboCare, to create simple 3D visualizations of pose information in MatPlot and Unity
- Verified motion captured data and developed a solution for visualizing missing pose data

University of Massachusetts - Lowell
Immersive Scholar

May 2023 - August 2023
Lowell, MA, USA

- Gained initial familiarity with ROS and Hello Robot's Stretch
- Tested a web-interface created by Hello-Robot and adapted the interface to work with a more dexterous wrist on a physical Stretch robot to use for household chores

PROJECTS & OUTSIDE EXPERIENCE

Automatic Estimation and Evaluation of Multi-Objective Human Preferences for Learning from Demonstration

Research Assistant Lowell, MA, USA

- Performed a research study exploring human preference for robotic movement using multi-objective evaluation for different tasks.
- Along with a PhD student, Brendan Hertel, a paper was published on this study to ELSP

Computer Vision Model Exposure

- Worked on developing a CNN model to recognize American Sign Language accurately in real-time using Pytorch with AdamW as an optimizer and categorical cross entropy for the loss function
- Evaluated the model based on latency and accuracy using the model's confusion matrix and F1 scores

SKILLS

Skills: C#, C/C++, Computer Vision, Git, Jupyter, Linux/Unix, Malware Analysis, OpenCV, Python, Unity, ROS2, Augmented Reality
